

KEVIN EZE

Front-End Engineer

hello@kevinez.me | [linkedin.com/in/kevinez](https://www.linkedin.com/in/kevinez) | United Kingdom · Open to remote / relocation

PROFILE

Front-end engineer with 7+ years building accessible, high-performance web platforms, preceded by 3+ years in QA engineering. Specialises in React/Next.js architecture, large-scale framework migrations, and web accessibility. Track record of shipping customer-facing features that move NPS and engagement metrics, while reducing delivery time and post-release support load.

EXPERIENCE

GoCardless — Software Development Engineer III *Mar 2021 – Present*

- ▶ Led the front-end build of Protect+ and the Merchant Dashboard Reporting suite — two of the platform's most highly requested features — driving a measurable increase in NPS scores.
- ▶ Led front-end architecture and delivery of page migrations from legacy frameworks to Next.js across GoCardless for Xero (GC4X), cutting implementation timelines by over 55% and reducing front-end-related support queries by 50%.
- ▶ Led the GC4X Setup Page migration in 5 weeks, down from a typical 12, the fastest migration delivered to date, while driving a significant drop in post-release support queries.
- ▶ Identified recurring ambiguity in QA ownership across projects and introduced a standardised test-case framework, now used GC4X-wide.
- ▶ Introduced a self-review commenting practice on pull requests to share context and reasoning, since adopted as a standard practice by the wider team.
- ▶ Identified and patched multiple high-severity security vulnerabilities in production systems, removing significant platform risk before exploitation.

Perkbox — Front-End Engineer *Jan 2019 – Feb 2021*

- ▶ Partnered with UX designers to deliver a full reskin of the web and mobile platform, including building a shared component library that improved consistency and sped up delivery for the wider front-end team.
- ▶ Introduced A/B testing to analyse user activity against different copywriting styles, generating insights that informed content strategy and helped increase engagement.

Perkbox — QA Test Engineer *Apr 2015 – Dec 2018*

- ▶ Built and maintained automated test suites, partnering closely with engineers to streamline regression testing and shorten release cycles.
- ▶ Progressed into a front-end engineering role after demonstrating strong cross-functional collaboration and code quality, marking a deliberate transition from QA into software development.

EDUCATION

BSc Computer Science, Brunel University London *Sep 2010 – May 2014*

SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES6+), React, Next.js, HTML5, CSS3, Semantic HTML

Testing & Observability: Cypress, Jest, Storybook, Sentry, Kibana

Practices: Web Accessibility (WCAG), CI/CD, Frontend Architecture, A/B Testing, Quality Assurance
